(54) Title: FLEXIBLE CONNECTOR WITH PRINTED CIRCUIT LINES ENCIRCLING TWO AXES

(57) Abstract: The invention relates to a flexible connector formed from a single layer flexible film with printed circuit lines. The flexible connector comprises a first connection means, a second connection means, a first part extending from the first connection means, wherein the first part is adapted to form a coiled part encircling a first axis, a second part extending from the second connection means, wherein the second part is adapted to form a coiled part encircling a second axis, and a third part interconnecting the first and second parts. The invention further relates to a method of manufacturing such a flexible connector, and a communication apparatus provided with such a flexible connector and comprising a first member and a second member, wherein the first and second members are mechanically connected by a two-axis hinge, and wherein circuitry of the first and second members are connected by said flexible connector.
